“ Whatever you do, work heartily, as for the Lord and not for men,”
Colossians: 14:16

The Design and Technology department is dedicated to delivering a well sequenced curriculum which develops learning in the acquisition of knowledge, skills and understanding whilst developing the All Saints Catholic College core values.

At the heart of the curriculum is the desire to deliver a broad variety of lessons which prepare students to be successful in the subject and their wider lives. We want every child to develop a love for creating something from scratch, whether that be in a kitchen, on a laptop or in a workshop. The curriculum is designed to maximise students’ long-term retention and ability to transfer ideas. Our aim is for pupils to know more, remember more and understand more.

Design and technology is a fundamental subject, which educates students in how to analyse and solve problems, produce high quality solutions and learn how to convert their ideas into working products. A range of learning opportunities have been incorporated using methods that our pupils are unlikely to experience in other subjects in order to respond to the ever-changing world around them.

We provide an enriching learning environment so our students develop a lifelong love of creativity through designing and making. We encourage our students to respond creatively while developing necessary life skills through a broad and balanced Design and Technology curriculum which requires them to solve real and relevant problems within a variety of contexts, considering their own and other’s needs, wants and values.

We embed confidence in our students by encouraging them to take risks with their work to become more resourceful, innovative and independent, while following the All Saints Catholic College core values of faith, resilience, community, respect, excellence and family.

Be inspired. Be excellent. Succeed

We provide a window to attainable future possibilities by giving our pupils a hands-on taste of careers linked to Design and Technology including STEM experiences. We believe that Design and Technology contains important links to careers enabling our students to actively contribute to society while also developing essential life skills.

We want every child to develop knowledge of nutrition, food hygiene, and foster a life-long love of cooking with a focus on preparing meals from scratch to develop life skills and to reduce the chances of chronic health issues later in life.

Be inspired. Be excellent. Succeed
